

Software Engineering Job Descriptions

Standardized Technical Profiles & Hiring Specification Handbook

Overview: This document details standardized Job Descriptions (JDs) across primary software engineering levels and tracks, ranging from Entry-Level / Associate to Staff Software Engineer. Each JD outlines core objectives, responsibilities, technical prerequisites, competencies, and deliverables.

1. Associate / Junior Software Engineer

Level: L3 / Entry-Level

DEPARTMENT	EXPERIENCE	LOCATION	EMPLOYMENT
Engineering / Product	0 – 2 Years	Hybrid / Remote	Full-Time

POSITION SUMMARY

We are looking for an enthusiastic Associate Software Engineer to join our dynamic technology group. In this role, you will work alongside senior engineers to build, test, and maintain high-quality software applications. This position offers mentored growth, exposure to modern production tech stacks, and direct participation in agile development sprints.

KEY RESPONSIBILITIES

- Write clean, readable, and maintainable code under guidance.
- Develop unit and integration tests to ensure code robustness.
- Assist in bug fixing, troubleshooting, and issue resolution.
- Participate in agile ceremonies (daily standups, sprint reviews).
- Document feature logic, technical steps, and API endpoints.

QUALIFICATIONS & SKILLS

- BS/MS degree in CS, Software Engineering, or related field.
- Proficiency in at least one language (Python, Java, JS/TS, C++).
- Solid grasp of Data Structures, Algorithms, and OOP concepts.
- Basic understanding of SQL, RESTful APIs, and Git version control.
- Strong problem-solving mindset and eagerness to learn.

KEY TECHNICAL STACK

- Python / Java / JS
- Git / GitHub
- REST APIs
- PostgreSQL / MySQL
- Docker Basics
- Linux Commands

2. Full Stack Software Engineer

Level: L4 / Mid-Level

DEPARTMENT
Product Development

EXPERIENCE
3 – 5 Years

LOCATION
On-site / Hybrid

EMPLOYMENT
Full-Time

POSITION SUMMARY

We are seeking an experienced Full Stack Software Engineer to drive the end-to-end development of feature sets across both web frontends and backend services. You will translate product requirements into robust, scalable implementations, ensuring optimal performance, user experience, and architecture consistency.

KEY RESPONSIBILITIES

- Design and build responsive web UIs and scalable backend APIs.
- Optimize application performance for speed, accessibility, and scale.
- Integrate third-party services and manage data persistence layers.
- Conduct code reviews and champion best practices in testing.
- Collaborate with UI/UX designers and Product Managers.

QUALIFICATIONS & SKILLS

- 3+ years of professional full-stack web development experience.
- Strong command of Frontend frameworks (React, Vue, or Next.js).
- Proficiency in Backend runtimes (Node.js, Python/ Django, or Go).
- Experience with relational/NoSQL databases and ORM libraries.
- Working knowledge of CI/CD pipelines and cloud deployments.

KEY TECHNICAL STACK

React / TypeScript

Node.js / Express

PostgreSQL / Redis

GraphQL / REST

AWS / Docker

Jest / Cypress

3. Senior Backend Engineer (Distributed Systems)

Level: L5 / Senior

DEPARTMENT

Core Platform /
Infrastructure

EXPERIENCE

5 – 8 Years

LOCATION

Remote / Hybrid

EMPLOYMENT

Full-Time

POSITION SUMMARY

We are looking for a Senior Backend Engineer to architect, implement, and scale our core platform infrastructure. In this role, you will take ownership of high-throughput distributed microservices, data pipeline integrity, cloud infrastructure elasticity, and zero-downtime database migrations.

KEY RESPONSIBILITIES

- Architect fault-tolerant backend services handling high RPS.
- Lead technical design discussions and author RFCs/specifications.
- Implement event-driven streaming architecture and caching layers.
- Diagnose complex performance bottlenecks and latency bottlenecks.
- Mentor junior and mid-level engineers in system design.

QUALIFICATIONS & SKILLS

- 5+ years specializing in distributed backend infrastructure.
- Expert proficiency in Go, Java, Python, or C++.
- Deep knowledge of messaging systems (Kafka, RabbitMQ).
- Hands-on experience with Kubernetes, Docker, Terraform, and AWS/GCP.
- Strong system design skills (Sharding, Caching, Consensus protocols).

KEY TECHNICAL STACK

Go / Java / Python

Apache Kafka

Kubernetes / Helm

AWS / GCP

gRPC / Protobuf

Prometheus / Grafana

4. Staff Software Engineer

Level: L6 / Staff-Lead

DEPARTMENT
Technical Leadership

EXPERIENCE
8+ Years

LOCATION
Hybrid / Global

EMPLOYMENT
Full-Time

POSITION SUMMARY

The Staff Software Engineer serves as a technical leader across multiple engineering teams. You will align software architecture with long-term business goals, pioneer engineering standards, tackle complex cross-domain engineering challenges, and elevate technical excellence across the organization.

KEY RESPONSIBILITIES

- Define multi-year technical vision and software architecture strategy.
- Unblock complex organizational and cross-team dependencies.
- Drive engineering standards, security practices, and RFC reviews.
- Partner with Product VPs and CTO on roadmap feasibility.
- Sponsor engineering growth, mentoring tech leads and seniors.

QUALIFICATIONS & SKILLS

- 8+ years delivering large-scale software products to production.
- Proven track record of architectural leadership across multi-team orgs.
- Deep domain expertise in cloud platform engineering and data systems.
- Exceptional communication, stakeholder management, and mentorship.
- Strong business acumen and pragmatic technical decision-making.

KEY LEADERSHIP & TECH COMPETENCIES

System Architecture

Technical Strategy

Multi-Cloud Strategy

Engineering Governance

Cross-Team Leadership
